

ERIEZ Quick Ship Equipment Catalog

Eriez' ProGrade® magnetic separators offer a solution for every process application. Whether you need a low cost plate magnet for equipment protection or a high power sanitary grate magnet to ensure product purity, ProGrade gives you the best for less. Three levels of ProGrade magnets are available in grate, plate, tube, and trap assemblies.

X8 Metal Detector

X8 Metal Detector Quick Ship program is designed to match stocked conveyors and Metal Detector apertures for fast delivery. Eriez stocks our most popular sized metal detector apertures and 4 stainless steel, wash down conveyor widths for quick assembly and delivery as well as select vertical and liquid line systems.

FEEDERS FAST

Feeders Fast offers nearly 40 feeder models using stock components, available for shipment within five days. These quick-ship, electromagnetic vibratory feeders from Eriez are AC powered making them extremely reliable and energy efficient – ideal for many sanitary, industrial and process applications. Compact feeders up to 20 TPH are available in tray sizes up to 16 inches wide and 60 inches long. Heavy-Duty feeders now available in 4 models with capacities from 70 to 270 TPH.

WHEN YOU NEED IT NOW!

Can't wait for a solution to a challenging problem? The most popular Eriez products are now ready for next-day shipment through the **EriezXpress™** program.

Eriez stocks its most popular items for immediate needs, many for next-day shipment.

EriezXpress™

Eriez has grown its stocking program to cover many of our most popular items from grate magnets to vibratory feeders and metal detectors. Many of these quick-ship items are available in three convenient designations: Next-Day, 5-Day and 10-Day shipment.

10-Day Express Shipment

Six of our most popular manual cleaning SE-7000 Series Suspended Electromagnet models are available for express assembly in 10 days. These magnets range from 42 to 78 inches wide, offering a size to meet typical conveyor widths and include options for suspension style, junction box rating, high elevations and oil type.

Eriez' magnetic separators offer a solution for every process application. Whether you need a low cost plate magnet for equipment protection or a high power, sanitary grate magnet to ensure product purity, Eriez gives you the best for less. Three levels of magnet strength are available in grate, plate, tube and trap assemblies.

Magnetic Separators

ProGrade Ceramic

Protection from large tramp metals damaging downstream equipment. Ceramic magnets and quality construction at low prices.

ProGrade Rare Earth

Prevents product contamination and small tramp metal damage. Assemblies feature stainless steel construction, high-power rare earth magnets with demanding attention to welds and finish.

The ultimate protector of process purity combines the finest materials and construction techniques with the industry's most powerful RE7 Xtreme Rare Earth magnetic circuits.

Designed to Remove

Medium to Large Tramp Metal

Small Ferrous Contamination

Weakly Magnetic Fine Ferrous Contamination

Tube Magnets

Individual magnetic tubes, 1 inch (25 mm) in diameter and from 4 inches (100 mm) up to 24 inches (610 mm) long, can be used to remove ferrous contaminants from liquids in tanks, as a quality control check of dry bulk materials and in many other ways where a powerful, portable magnetic power source is needed. All magnetic tubes are available with 1/4-20 UNC drilled and tapped end plugs.

FEATURES:

- 1 inch diameter
- Continuously welded
- 316L stainless steel
- 1/4-20 tapped end plugs
- Glass bead surface finish
- Rare Earth and Xtreme Rare Earth Magnet Circuits for temperatures up to 150°F

Grate Magnets

SQUARE & RECTANGULAR

Square and rectangular Permanent Magnetic Grate Magnets remove ferrous contamination in hoppers, chutes, floor openings and other areas where free flowing materials are present. These grate magnets are also constructed to fit square and odd-shaped hoppers. The all-stainless steel unit is installed by simply placing the grate in the hopper with the ends of the magnetic tubes or tie bars resting against the sides.

FEATURES:

- All stainless steel construction
- 1 inch diameter tubes on 2 inch centers
- Sanitary construction (Xtreme Rare Earth only)
- Glass bead surface finish
- 150°F Max Temp (Rare Earth and Xtreme Rare Earth)

ROUND

Round Permanent Magnetic Grate Magnets remove ferrous contamination in hoppers, chutes, floor openings and other areas where free flowing materials are present. These round grate magnets are constructed to fit round processing lines or hoppers. The all-stainless steel unit is installed by simply placing the grate in the hopper with the ends of the magnetic tubes or tie bars resting against the sides.

FEATURES:

- All stainless steel construction
- 1 inch diameter tubes on 2 inch centers
- Sanitary construction (Xtreme Rare Earth only)
- Glass bead surface finish
- 150°F Max Temp (Rare Earth and Xtreme Rare Earth)

Grate-In-Housing

Tramp and fine iron removal in enclosed flow lines or at screen discharges is simplified by Eriez' multi-bank units built into convenient housings. These separators have a slide-bolt door front which makes the magnetic tubes readily accessible for cleaning. Two rows of ceramic or Xtreme Rare Earth tube magnets provide the ultimate protection.

FEATURES:

- Two rows of staggered magnets
- Mild steel housing (Ceramic only)
- Removable door with plastic knobs
- Stainless steel housing and sanitary construction (Xtreme Rare Earth only)
- 150°F Max Temp (Xtreme Rare Earth)
- Dust tight

Easy-to-Clean Grate-In-Housing

The Easy-To-Clean Rare Earth Grate-In-Housing provides quick removal of accumulated fine iron contamination. Simply slide the individual door fronts from the housing and the accumulated metal contamination is scraped from the tube and discharged out the front of the housing. The cleaning cycle is reduced to only a few seconds with this push-pull operation.

FEATURES:

- Two rows of staggered magnets
- 1 inch diameter magnet tubes on 2 inch centers
- Stainless steel tube scrapers
- Metal contaminant discharge chute
- All stainless steel construction
- Glass bead surface finish
- 150°F Max Temp

Easy-to-Clean DSC Grate-In-Housing

MANUAL

AUTOMATED CONVERSION KIT

Eriez' Automated and Manual Easy-to-Clean DSC (Dust-Tight, Sanitary, Convertible) Grate-In-Housings are rugged tramp iron separators. With Eriez' single-skinned tube design, the iron is removed with an A286 stainless steel split ring sandwiched between a pressure plate and backing plate. As both banks cycle, tramp iron is stripped from the tubes outside the product zone. The tramp metal is then discharged through a small chute at the front of the housing. The traditional cleaning cycle is reduced to a simple push-pull operation.

Depending on the application, some customers find their process has excessive tramp iron or the Grate-In-Housing is installed in a difficult to access location requiring an upgrade to a self-cleaning model.

The DSC's convertible design allows customers to purchase a Conversion Kit and use hand tools to make the unit an automatic cleaner. The kit requires no cutting or welding, and includes a NEMA 12 push-button control panel with air prep and regulation.

FEATURES:

- RE7 Xtreme Rare Earth only
- Dust-Tight construction
- Sanitary housing
- Convertible Manual ETC can be upgraded to Auto ETC
- Catch pan discharge
- Blank flanges
- All 304 Stainless Steel construction
- 12.25 inch overall height
- 150° Max Temp

Rare Earth Drawer Magnet Assemblies

MODEL PM MAGNETS

Eriez' Model PM Rare Earth Drawer Magnet assembly will improve your profitability by preventing costly product defects, plugged value gates and hot runner tips, machine damage and downtime. These powerful Rare Earth Grates simply slide into most existing drawer magnet housings, immediately improving separation performance and your bottom line. Four sizes are available and they can be used with mild steel housings.

FEATURES:

- Designed to fit competitor housings
- 316L Stainless Steel PM Rare Earth magnets are up to 3x stronger than other RE magnets and up to 50x stronger than many ceramic magnets
- Clear drawer front for visual inspection of magnets
- Close tube spacing for superior tramp metal recovery (1.75 inch centerlines)
- Ability to capture and hold fine and weakly magnetic particles
- Magnets handle resin temperature up to 150°F and 250°F
- Adhesive backed gaskets included for customer installation on the door or housing
- Compatible with mild steel housing due to our unique guide rail design
- Slots are 1/2 inch wide by 1-1/16 inch overall length

Complete PM Grate-In-Housings

ALSO AVAILABLE

Pneumatic Magnets

RF CARTRIDGE

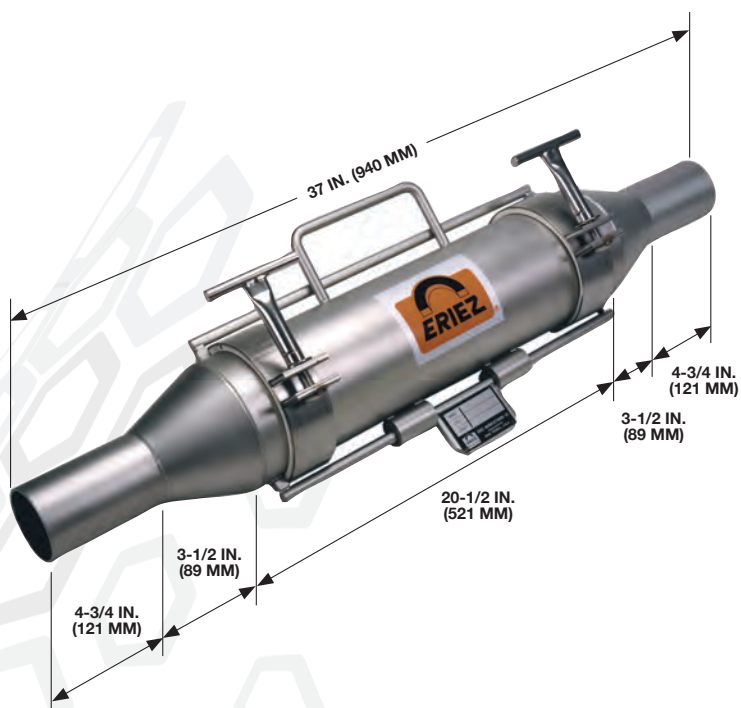

Eriez' "RF" (Radial Field) Cartridge Magnet is ideal for removing tramp iron from dry, free-flowing food or chemical products conveyed in pneumatic pipelines.

Material enters the housing, is distributed by a solid stainless steel cone and passes in close proximity to the magnetic cartridge.

Ferrous contamination is attracted and held by the magnet while the separated product continues past the magnet and out of the housing. The ferrous contamination remains on the magnet until the cartridge is removed and cleaned.

FEATURES:

- High-strength permanent tapered-step magnetic elements
- Stainless steel housing construction
- Removable magnet element with built-in handles for easy cleaning
- Utilizes typical pneumatic conveyor couplings for easy operation and positive seal
- Independent magnet element for easy handling
- Standard units available for up to 25 psig (1.7 bar) operation and -10 psi vacuum
- Tube O.D. ends
- For horizontal or vertical-up use only

Ferrous Traps

MODEL B

These powerful permanent magnetic traps provide protection for liquid lines and sensitive processing equipment such as pumps. They preserve product purity by removing small particles of magnetic scale, rust and fine iron contamination.

The magnetic element, consisting of a group of magnetic tubes, is arranged to cause the material flow entering the body to impinge against the tubes and filter through the magnetic field, completely covering the open area. This arrangement takes advantage of the material change in direction and the difference in inertia between the unwanted iron and the material carrying it. Entrapped iron will have a tendency to work around and cling to the downstream side of the tubes. This action prevents iron particles from being washed off by the flow of material.

FEATURES:

- All 316 stainless steel construction
- Cast body
- Pressure up to 150 psi
- Glass bead surface finish
- Ferrule (14 WLMO) units feature sanitary construction
- For product and CIP temperatures up to 250°F

MODEL U

The Model U Trap utilizes a Rare Earth magnet circuit to remove fine and weakly magnetic contamination like rust, scale, or screen wire. Model U Traps remove ferrous contamination from difficult-to-flow or chunky products like vegetables, salsa, or meat batters.

The special body design of the Model U incorporates a gradually tapered transition that gently directs the product over a smooth magnetic surface. The body design does not incorporate diverters or baffles.

This design works well for applications where finger-style traps would plug due to large product size or where delicate products would break if forced against a baffle.

The Model U Trap with its compact design can be installed easily into 3 or 4-inch (76 or 102 mm) lines. The standard unit is sanitary, incorporates our Super-Strength Rare Earth magnet element, a 304 stainless steel body and 14WLMO Ferrule Ends.

146961	Eriez Model U-4 Magnetic Trap 304 SS Body with 4" 14WLMO Inlet and Outlet Xtreme Rare Earth Plate Magnet with 400SS Step

MODEL L

This Ferrous Trap model has been designed to serve as an effective, low-cost, magnetic pipeline trap where operating conditions are not severe. This unit is cast stainless steel construction capable of withstanding pressures up to 150 psi (10.5 kg/sq cm). It is built for 2 inch (51 mm) pipelines; standard reducers can be used to adapt it to lines as small as 1/2 inch (13 mm).

FEATURES:

- 2 inch NPT Ports
- Cast stainless steel
- Single tube magnetic element
- Pressure up to 150 psi
- 150°F Max Temp (Rare Earth)

Plate Magnets

Eriez Permanent Plate Magnets are the workhorses of magnetic separation and provide dependable and economical solutions to problems associated with tramp iron contamination in processing lines. Plate Magnets installed in chutes, spouts, ducts, pipes or suspended over conveyors remove tramp iron to help prevent costly shutdowns associated with machinery damage, prevent spark-caused fires and explosions, prevent product contamination and improve product purity.

FEATURES:

- All stainless steel construction
- Smooth face with hinges (Ceramic magnets)
- Glass bead surface finish
- Milled 400 SS step face with hinges (Rare Earth+ and Xtreme Rare Earth+)
- Sanitary finish (Rare Earth+ and Xtreme Rare Earth+)
- 150°F Max Temp (Rare Earth+ and Xtreme Rare Earth+)

RE7 Xtreme Rare Earth Inspection Tubes

Perfect for quality checks at any stage of a process. The industry's most powerful tube magnet in three lengths with a rubber grip handle and dead zone making it easier to wipe off.

FEATURES:

- Varied lengths for different applications
- 150° Max Temp

Dimensions		Part No.
OAL 15"	10" Long Magnetic Zone	201703403G1
OAL 20"	15" Long Magnetic Zone	201703775G1

Handheld Inspection Magnet

Handheld inspection magnet for checking the quality of a product or removing loose tramp iron from a flow of materials.

FEATURES:

- Strong Rare Earth Magnets
- Deep-reach magnetic field
- All 304 stainless steel contact
- Avoid material rejections

Dimensions (in inches)			Weight	Part No.
A	B	C/D		
5 OAH	2.75	2.25	2 lbs.	201412918G1

Pull Test Kits

DIGITAL AND ANALOG KITS

Eriez offers two different Pull Test Kit options, one with a mechanical scale and one with a digital scale with traceable calibration certification.

The kit with a digital scale is recommended for customers in the food or pharmaceutical industries that require calibrated scale certification for auditing purposes. The digital scale is also available separately.

FEATURES:

- Measures your magnet's consistency in performance over time
- Variety of test pieces and spacers or different magnet styles (kit only)
- Digital Scale and Digital Scale Kit is NIST Certifiable by your local scale company
- Part of your Quality Assurance or HACCP Programs
- Convenient carrying case

Type	Certified	Weight		Part No.
		lbs	Kg	
Manual Scale Kit	No	8.0	3.6	107121E
Digital Scale Kit	Yes	10.0	4.5	201512425G2
Digital Scale Only	Yes	5.0	2.3	470697

All prices and specifications are subject to change without notice. Terms and conditions of sale are available at www.eriez.com.

- STANDARD KIT with mechanical scale
- DIGITAL CALIBRATED KIT includes traceable digital scale

ERIEZ

Suspended Electromagnets

Eriez Suspended Electromagnets are designed to reach into a burden of material on a conveyor belt to remove large unwanted tramp metal that can damage downstream equipment. They are the global standard for rugged, dependable suspended electromagnets.

SELF CLEANING

FEATURES:

- Convertible design allows cross-belt or head pulley positioning
- Exclusive oil expansion tank prevents condensation and protects against hot spots to extend coil life
- Five-year coil warranty
- Adjustable oil expansion tank design is mounted with slotted brackets for any installation angle, allowing the user to rotate the tank so the moisture drain is always on the low side
- CSA Approved

MANUAL CLEAN

FEATURES:

- Exclusive oil expansion tank prevents condensation and protects against hot spots to extend coil life
- Five-year coil warranty
- Aluminum coils use Nomex insulation and fiberglass spacers to prevent shorts
- Adjustable oil expansion tank design is mounted with slotted brackets for any installation angle, allowing the user to rotate the tank so the moisture drain is always on the low side
- CSA Approved
- EriezXpress units include an adjustable cable sling for single-point suspension

Suspended Permanent Magnets

Suspended Magnetic Separators are designed for applications where ferrous contaminants are to be removed from bulk products – either on a moving conveyor belt or chute.

FEATURES:

- Low operating cost
- Powerful magnetic field
- Permanent magnet requires no power
- Recommended heights of 12 inches or less
- Uninterrupted magnetic protection
- Manual clean magnets include drawer type stripper and cable sling suspension
- Simple installation
- 230V/480V input for drive

CP 20 MODELS

The CP 20 Series Permanent Magnets provide a continuous and uniform magnetic field across the feed belt to remove damaging tramp iron.

TP 25 MODELS

The TP 25 Series Magnets utilize a powerful twin pole magnetic circuit to provide maximum ferrous removal at higher suspension heights.

Other Magnetic Separators

Eriez offers many types of magnetic separators not featured in this catalog of Quick Ship equipment. Below are a few special order models.

DRUM-IN-HOUSING SEPARATOR

Drum magnets are designed to separate a higher volume ferrous material. By design, they are continuously self-cleaning and extremely durable.

- Continuous self-cleaning operation for optimum separation efficiency
- Numerous magnetic circuits including Criss-Cross, Agitation, and numerous Rare Earth designs for every separation requirement
- Adjustable splitter to fine-tune separation performance
- Ideal for high-volume 24/7 ferrous removal

ROTA-GRATE® IN-HOUSING REMOVABLE TUBE ASSEMBLY

Same design as the Rota-Grate In-Housing, with removable tube magnet assemblies. This greatly speeds cleaning during operation.

- Individual Tube Magnets can be removed one-by-one for easy cleaning
- Low profile housing design
- SEW Euro drive motor permits rotating of reel by hand to aid in the cleaning process
- Swing-bolt, hinged door with “T”-handles for easy access

AUTO DEEP REACH MAGNETIC SEPARATOR

Eriez Deep Reach Magnetic Separator removes tramp iron from heavy flows that normally bridge or choke grate magnets. Two powerful magnet circuits surround a chute to penetrate product flows like cocoa, powdered cheese, brown sugar, starch, flour, gypsum and other sticky products to remove ferrous contamination.

- Automated stripper periodically removes accumulated tramp iron
- Stainless steel housing with safety guard for moving parts
- Rare Earth or ceramic magnetic circuits
- Push-button operation

RARE EARTH ROLL

Eriez Rare Earth Roll high-intensity magnetic separators provide maximum efficiency in the separation of weakly magnetic particles in product purification applications for fine granular materials.

- Powerful Rare Earth Roll Magnet produces in excess of 20,000 surface gauss for unsurpassed separation efficiency
- High-strength Kevlar belt for continuous self-cleaning operation
- Includes vibratory feeders to meter material for consistent separation performance
- Graduated and adjustable splitter to fine-tune separation efficiency

Eriez Quick Ship program is designed to stock Metal Detectors for quick assembly and delivery.

X8 Metal Detector

Metal Detectors

X8 Construction

Light Dome

Robust, low-profile, multi-colored dome light provides multiple levels of visual and audible alerts based on the user-defined settings.

Thick Polymer Aperture

The specially designed and machined thick polymer liner seals the internal coils, making the aperture head impenetrable during high-pressure wash down.

High-Pressure Wash Down Guard

Furnished with a PETG shield that is durable, scratch resistant, and protects the touch screen from physical damage and direct impact.

Easy Setup

Software provides automatic product setup with self-checking capabilities and calibration verification for simple start-up and operation.

Data Access

Safe, protected access to a range of data ports provides remote communication transfers via Ethernet and USB.

Food-Grade Belt

Plastic chain, food-grade belts are easily removed and ideal for packaged foods.

Stainless Steel Sanitary Construction

The system is constructed from 304 stainless steel making it extremely durable.

X8 Metal Detectors

Eriez' feature-rich, dual frequency X8 Metal Detector is designed to achieve the highest levels of sensitivity to detect small ferrous, non-ferrous and stainless steel metal contaminants.

The X8 Metal Detector offers a 4-inch easy-to-use capacitive touch screen interface, multiple pre-programmed languages, easy set-up and reporting, USB and interface ports, remote access and the standard high-pressure wash down design.

FEATURES:

- **Stainless Steel Construction**
- **Tool-less Disassembly**
- **Compact Footprint**
- **Variable Speed Belt**
- **Adjustable Belt Height**

X8 LIQUID LINE METAL DETECTORS WITH DOME LIGHT

Eriez Liquid Line System enhances product purity and protects vital downstream equipment from metal in the product stream.

The X8 Liquid Line Metal Detectors are used for viscous products such as liquids, slurries, syrups, pastes and many other pumped products. When metal is detected in the product flow, a reject signal is channeled to one of the available output relays. The output relay can be used to activate a ball valve, control a visual or audio alarm, or send a signal to a PLC.

Feeders Fast offers nearly 40 feeder models using stock components, available for shipment within five days. These quick-ship, electromagnetic vibratory feeders are AC powered making them extremely reliable and energy efficient – ideal for many sanitary, industrial and process applications. Compact feeders up to 20 TPH are available in tray sizes to 16 inches wide and 60 inches long. Heavy-Duty feeders now available in 4 models with capacities from 70 to 270 TPH.

**FEEDERS
FAST** 

Vibratory Equipment

Vibratory Feeders

- 1 304 stainless steel, continuously welded tray interior
- 2 Glass beaded finish
- 3 Steel-It epoxy paint
- 4 AC electromagnetic drive

RELIABLE & EFFICIENT

- Low maintenance - no rotating parts, no lubrication
- Energy efficient
- Virtually silent operation

FLEXIBLE

- Accurately feeds most products - models are designed to feed damp, light, dense, heavy, fluffy, sticky, leafy and most difficult to move products
- Fits all applications - from packaging, batching, metering and more

VERSATILE

- Easily integrated into feed systems
- Clean construction
- Drives - 115 Volt / 60 hz / 1-phase operation; HD drive 115/30
- Drive painted with Steel-It epoxy, FDA approved
- CE and CSA approved models available

SOLID-STATE CONTROLS

- Compact NEMA 12 type, IP54 enclosures ideal for automation
- Accepts analog signals (4-20 MA or 0-10 VDC)
- Remote on/off

ELECTROMAGNETIC DRIVE

Drive Operation

The poles of the permanent magnet are shown intermeshed in the air gaps of the AC electromagnet. The polarity of the permanent magnet is fixed, while the polarity of the electromagnet alternates, creating the vibratory motion. The electromagnet polarity is shown as it exists on one side of the AC sine wave.

When energized, both poles of the permanent magnet are attracted toward the unlike electromagnet poles while being repelled in the same direction by the like poles. This creates four forces acting together to drive the armature and moving mass in the same direction.

On the opposite side of the sine wave, the polarities of the electromagnet are reversed; the armature is driven in the opposite direction completing the vibratory cycle.

Amplitude Control

These drives offer 100% variable feed rate control. The amplitude of the vibration is directly controlled by the amount of AC voltage applied to the electromagnet. Simple variation of the AC voltage results in similar amplitude variation from zero to maximum.

Electromagnetic Compact Feeders

MODEL A FEEDERS

The smallest feeder in the line, this model will give precise feeding of the most minute amounts of materials. It is ideal for feeding a regulated amount of granular to small lump material from a hopper to a second process, in small packaging operations or laboratory use.

MODEL C FEEDERS

Larger than Model A Feeders, these units use the same patented drive that provides the best linearity in the industry. Special construction is also available for Class II, Group F and G installation.

MODEL HS FEEDERS

Eriez AC operated Hi-Speed (HS) Feeders have been designed for exceptionally high speed feeding of light, bulky materials. They provide greater economy and efficiency in feeding, filling, etc., and are ideal for use in conjunction with many weigh scale and packaging machines.

These feeders operate at speeds up to 75% greater than standard models; however, they do follow many of the basic tried and proven mechanical design and construction features of other Hi-Vi Feeders.

The units are light and functional and can be installed easily in a minimum of space in conjunction with other equipment.

MODEL HD FEEDERS

High Deflection (HD) Vibratory Feeders combine the higher deflection 3/16 inch (4.8 mm) and lower frequency (30 cps) advantages of a mechanical feeder with the trouble-free service of an electromagnetic feeder.

The Model HD is designed to handle powders and leafy products that normally could not be fed successfully in an electromagnetic feeder. Feed rates of up to 80 feet per minute (24 m/min) are possible for products with a bulk density less than 10 lb/ft³ (.16 gm/cc).

Electromagnetic Heavy Duty Feeders

58B

MODEL B FEEDERS

Eriez Electromagnetic Heavy Duty Vibratory Feeders can be used to convey abrasive products evenly and efficiently. These units are often used to feed material out of a hopper onto a belt or feed material to a crusher or screen.

FEATURES:

- Electro-permanent magnetic drive
- Low power consumption
- 10-degree down slope
- Suspension mounting
- Painted mild steel tray
- CE and CSA approved
- 115-volt, 60Hz, 1-phase AC operation (58B)
- 460-volt, 60 cycle, 1-phase AC operation (65B, 75B, 85B)
- Replaceable abrasion resistant steel liners (65B & 75B)
- Replaceable UHMW liners (85B)

65B

Controls

UniCon

UniCon HC

G30

UniCon Models

Our UniCon line of controls offers excellent control of a wide range of electromagnetic feeders with the features customers require: Analog input (4-20 MA or 0-10 VDC), remote on/off and includes a standard NEMA 12 enclosure.

UniCon HC Models

This high power line-up of controls offers excellent controllability of our heavy duty electromagnetic feeders with the features customers require: Analog input (4-20 MA), remote on/off and optional accelerometer feedback for precise control of tray deflection. Comes in a standard NEMA 4 enclosure.

G30 Control

The G30 includes the standard features to meet most any application requirements; Analog input (4-20 MA or 0-10 VDC), remote on/off and optional accelerometer feedback for precise control of tray deflection. Includes a standard NEMA 12 enclosure.

Electromagnetic Bin Vibrators

Eriez offers twelve AC drive units to improve flow of hard-to-handle materials in bins, hoppers and chutes.

Our unique magnetic drive circuit provides a simple yet powerful solution to difficult material flow applications. These vibrators, with their totally enclosed patented magnetic drive, can be used for applications ranging from the tiniest hopper to huge bunkers with reinforced heavy steel plate and liners.

The concentrated vibration, with its powerful positive drive in both directions, applies a superior action to bin walls. This results in more economical, more efficient flow of hard-to-handle materials.

FEATURES:

- Electro-permanent magnet drive
- AC operation
- Simple controls
- Encapsulated coils
- “Pinpoint” vibration
- Enclosed drive element
- Low power consumption
- Dust-tight enclosure
- CE and CSA approved
- 115V / 60 Hz

Model D20N

With bin capacity up to 5 cu. ft. (0.14 cu. m), the 20N is ideal for many light-duty applications. Hopper walls should be 18 ga to 3/32 inches thick (1.3-2.4 mm).

Model D30N

With bin capacity up to 15 cu. ft. (0.4 cm), the 30N is ideal for many light-duty applications. Hopper walls should be 3/32 to 1/8 inches thick (2.4-3.2 mm).

Model D30P

Bin capacity up to 20 cu. ft. (0.57 cu. m). For medium-duty applications, this model effectively handles a wide variety of hard-to-move materials. Hopper walls should be 1/16 to 1/8 inches thick (1.6-3.2 mm).

Model D40P

Bin capacity up to 3 tons (2.7 MT). For medium-duty applications, this model effectively handles a wide variety of hard-to-move materials. Hopper walls should be 1/16 to 1/8 inches thick (1.6-3.2 mm).

Model D55P

With bin capacity up to 18 tons (16.3 MT), this heavy-duty impact model is designed for larger capacity applications. Its powerful action makes it ideally suited for difficult material-moving jobs. Hopper walls should be 1/4 to 5/16 inches thick (6.4-8 mm).

Model	AMP	Control	Part No.
D20N	0.6	A	101642E
D30N	1.5	A	101657E
D30P	0.5	A	101680E
D30S	0.5	A	10168301
D40P	1.4	A	101711E
D40S	1.4	A	10171801
D50S	1.6	A	10172501
D55P	4.0	B	101907E
D55S	4.0	B	10190907

ERV - Electric Rotary Vibrators

Eriez' range of rotary vibrators is the result of 40+ years of vibratory experience and analysis, ensuring long-term durability. The standard ERV models are constructed for wet and dusty environments eliminating the concerns of environment conditions.

These vibrators are effective flow-aid devices to move material efficiently through small hoppers to large bunkers. The elliptical action of the ERV helps settle material in bags, boxes or other materials for shipping or storage.

FEATURES:

- Suitable for washdown and dusty environments
- Durable powder coat finish
- Tropicalized windings
- Continuous operation at 100% force output
- Adjustable eccentric weights to set force output
- Rugged construction with high-quality bearings
- Suitable for Class II, Div. 2, group F, G
- ETL approved
- Xpress models are 115V / 60Hz / 1-ph operation

Selection criteria for ERV model

Max. Material Weight in Hopper		3600 rpm Single Phase	Typical Hopper or Chute Wall Thickness
Content (Kg)	(Lb)		
998	2200	ERV 220/2M	1/8 – 3/16 in
1996	4400	ERV 440/2M	3/16 – 1/4 in

ERV 2 Pole Vibrators (3600 RPM) - These high frequency models are well suited to address the majority of hopper and chute applications. Materials that are more than 25 lb/ cu ft typically respond well to high frequency vibration.

Model	Size	RPM	Part No.
ERV220/2m	10	3600	453797E
ERV440/2m	20	3600	453798E
